It all started with ...

Then came ...

Then came ESM...

```
import {Component} from '@angular/core';
import {FormsModule} from '@angular/forms';
import {bootstrapApplication} from '@angular/platform-browser';

@Component({
  selector: 'app-root',
  standalone: true,
  template: `
    <label for="name">Name:</label>
    <input type="text" id="name" [(ngModel)]="name" placeholder="Enter a name here" />
    <hr />
    <h1>Hello {{ name }}!</h1>
  `,
  imports: [FormsModule],
})
export class DemoComponent {
  name = '';
}
```

Then came `async/await`...

```
// users/[id].get.ts
export default defineEventHandler(async () => {
  const id = getRouterParam(event, 'id')

  const db = useDatabase();

  const { user } = await db.sql`SELECT * FROM users WHERE id = ${id}`;

  return {
    user,
  };
});
```

And fancier tools...

And fancier tools...

And fancier tools...

And fancier tools...

And fancier tools...

Project goals

Project goals

- ✓ Provide full stack solution for most angular apps

Project goals

- ✓ Provide full stack solution for most angular apps
- ✓ Get started insanely quick

Project goals

- ✓ Provide full stack solution for most angular apps
- ✓ Get started insanely quick
- ✓ Provide templates

Project goals

- ✓ Provide full stack solution for most angular apps
- ✓ Get started insanely quick
- ✓ Provide templates
- ✓ Create developer experience

Project goals

- ✓ Provide full stack solution for most angular apps
- ✓ Get started insanely quick
- ✓ Provide templates
- ✓ Create developer experience
- ♥ Stay open source

Project anti-goals

Project anti-goals

✗ Provide full stack solution for *every* app

Project anti-goals

- ✗ Provide full stack solution for *every* app
- ✗ Prevent you from using your favorite tech

Demo time

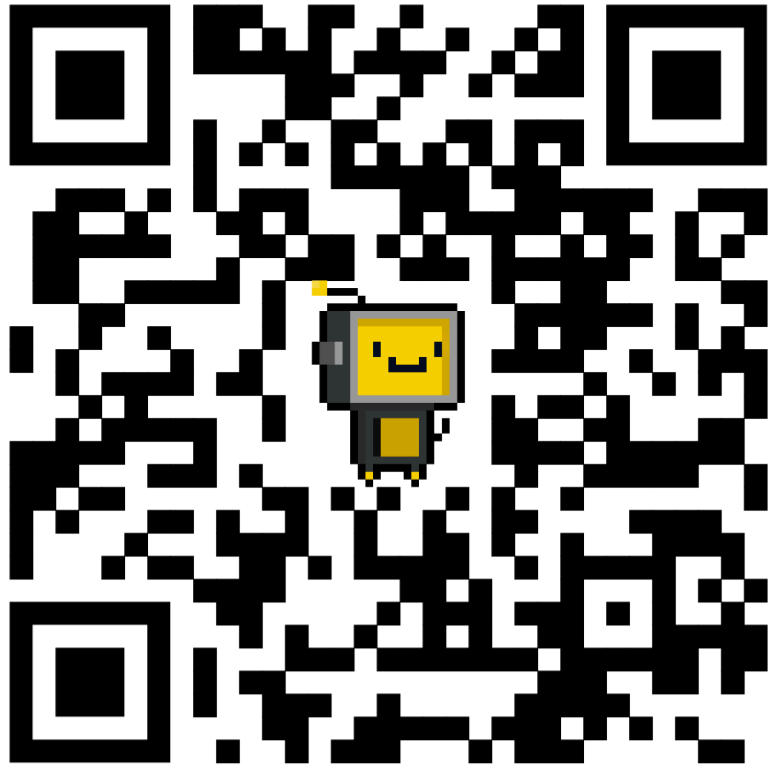

Roadmap

-  Create a project generator
-  Create a UI library using shadcn
-  Provide more templates
-  Create a discord community
