The Perfect Header Animation

Jan 29th, 2023 • Updated Mar 9th, 2023

What do you enjoy about being deep in a facinating article? The content? Probably. The author? Maybe. Not being distracted while reading? Most certainly.

One thing that frequently gets in the way for me is when the website hosting the article has a header that hides or shows at even the *slightest scroll*. [dropbox.tech](#), one of my favorite tech blogs, unfortunately does this.

iPhone 6 (P) 375 667 Story override

The screenshot shows the Storybook interface for a mobile component named "DraftDarkThemedMobile". The main view displays a dark-themed card with the title "Storybook is super coolio" and social sharing icons. Below this, a sidebar lists various theme variations. At the bottom, a control panel allows setting values for "title", "publishedOn", and "updatedAt".

Name	Control
title*	Storybook is super coolio
publishedOn	Set string
updatedAt	Set string

Lesson #1: Scratch your itch

3,765
Claps

Get started with Storybook and Next.js

Integrate Storybook with Next.js in four simple steps

Michael Chan

Nov 08, 2021 — @chantastic Last updated: Jul 03, 2024

```
// package.json

"scripts": {
-    "storybook": "start-storybook -p 6006",
-    "build-storybook": "build-storybook"
+    "storybook": "start-storybook -p 6006 -s ./public",
+    "build-storybook": "build-storybook -s public"
}
```

My solution wasn't perfect either, however

Lesson #2: It doesn't have to be perfect

Here's all the things wrong with it 😬

Here's all the things wrong with it 😬

- ✖ Didn't even cover 50% of Next.js's api

Here's all the things wrong with it 😬

- ✖ Didn't even cover 50% of Next.js's api
- ✖ Didn't have any tests

Here's all the things wrong with it 😬

- ✖ Didn't even cover 50% of Next.js's api
- ✖ Didn't have any tests
- ✖ Didn't support every Next.js version

Here's all the things wrong with it 😬

- ✗ Didn't even cover 50% of Next.js's api
- ✗ Didn't have any tests
- ✗ Didn't support every Next.js version
- ✗ Didn't support every Storybook version

Here's all the things wrong with it 😬

- ✖ Didn't even cover 50% of Next.js's api
- ✖ Didn't have any tests
- ✖ Didn't support every Next.js version
- ✖ Didn't support every Storybook version
- ✖ Didn't have a fancy branching strategy (i.e. everything off of `main`)

Predicting all of your users' needs beforehand is futile

Lesson #3: You will never be able to predict the needs
of your users until you ship

Styled JSX error #4

 Closed

armandabric opened this issue on Jan 25, 2022 · 5 comments

armandabric commented on Jan 25, 2022

Describe the bug

When I mount a `<style jsx global>` element I got an error:

```
ReferenceError: _JSXStyle is not defined
at GlobalStyles (http://localhost:3000/main.iframe.bundle.js:68147:34)
at renderWithHooks (http://localhost:3000/vendors-node_modules_ebay_nice-modal-react_lib_esm_index_js-node_modules_gog
at mountIndeterminateComponent (http://localhost:3000/vendors-node_modules_ebay_nice-modal-react_lib_esm_index_js-nod
at beginWork (http://localhost:3000/vendors-node_modules_ebay_nice-modal-react_lib_esm_index_js-node_modules_gogaille
at HTMLUnknownElement.callCallback (http://localhost:3000/vendors-node_modules_ebay_nice-modal-react_lib_esm_index_js
at Object.invokeGuardedCallbackDev (http://localhost:3000/vendors-node_modules_ebay_nice-modal-react_lib_esm_index_js
at invokeGuardedCallback (http://localhost:3000/vendors-node_modules_ebay_nice-modal-react_lib_esm_index_js-node_modu
at beginWork$1 (http://localhost:3000/vendors-node_modules_ebay_nice-modal-react_lib_esm_index_js-node_modules_gogail
at performUnitOfWork (http://localhost:3000/vendors-node_modules_ebay_nice-modal-react_lib_esm_index_js-node_modules_
at workLoopSync (http://localhost:3000/vendors-node_modules_ebay_nice-modal-react_lib_esm_index_js-node_modules_gogai
```

And my `GlobalStyles` component:

```
import theme from "guidelines/Theme/theme";

const GlobalStyles = () => (
  <style global jsx>{
    html {
      min-height: 100vh;
    }
    body,
```

...

Importing font files (*.woff, *.ttf) #15

 Closed

czebe opened this issue on Feb 1, 2022 · 10 comments · Fixed by #16

czebe commented on Feb 1, 2022

Describe the bug

Loading fonts seems to be failing with:

```
ModuleBuildError: Module build failed (from ./node_modules/storybook-addon-next/dist/images/next-image-loader-stub)
TypeError: unsupported file type: undefined (file: undefined)
    at lookup (/Users/.../node_modules/image-size/dist/index.js:52:11)
    at imageSize (/Users/.../node_modules/image-size/dist/index.js:104:16)
```

Webpack config shows that the font is being loaded via `next-image-loader-stub`:

```
{
  test: /\.(svg|ico|jpg|jpeg|png|apng|gif|eot|otf|webp|ttf|woff|woff2|cur|ani|pdf)(\?.*)?$/,
  use: [
    {
      loader: '/Users/.../node_modules/storybook-addon-next/dist/images/next-image-loader-stub.js',
      options: { filename: 'static/media/[path][name][ext]' }
    }
  ],
},
```

Perhaps it's because font files won't have a `width` and `height`?

[storybook-addon-next/src/images/next-image-loader-stub.ts](#)
Line 24 in [6583c20](#)

```
24     const { width, height } = imageSizeOf(content)
```

Just guessing... Would love to hear your insights.
Thanks!

More on my blog...

You Probably Don't Need Mocking

Mocking is overused and can lead to brittle tests. Here I go over alternatives and when you should reach for mocking.

Justifying Mocking

Testing techniques like mocking are often overused, but can be justified. In this post I break down what justifies such techniques.

Why did it get so much traction anyway?

Lesson #4: Zero config is a killer feature

You're done

You're done ...seriously

Lesson #5: Documentation is a killer feature

Success started to be a burden though

Lesson #6: Automate as much as possible

Automation aside, there's a more critical thing to build

A dark, atmospheric photograph showing a person from behind, wearing a red cap and goggles, crouching in a narrow, rocky crevice. The scene is dimly lit, with a small amount of light highlighting the person's head and the immediate surroundings.

Lesson #7: Get good at spelunking

More on my blog...

[Code spelunking: How to dive into unfamiliar code \(part 1\)](#)

Ever have problems making sense of code you didn't write? I'll help you with proven techniques in this post.

[Code spelunking: How to dive into unfamiliar code \(part 2\)](#)

Reading other people's code is hard. Here is how I do it.

Code isn't the only thing you trip over though

Lesson #8: Write well for your own sake

RyanClementsHax commented on Apr 25, 2022 • edited

Owner ...

So it seems that the following code no longer works

```
// .storybook/preview.js
import * as NextImage from "next/image";

const OriginalNextImage = NextImage.default;

Object.defineProperty(NextImage, "default", {
  configurable: true,
  value: (props) => <OriginalNextImage {...props} unoptimized />,
});
```

This has been the convention to getting `next/image` working in storybook for a long time. I'm not sure why it is broken now. [This is a compare between next 12.1.4 and 12.1.5 and nothing stands out to me as a major change.](#)

I will continue to look into this, but if anyone has any insight, feel free to chip in.

A more detailed explanation for why this error is occurring is that when `optimized={true}` on `next/image`, the loader logic is run and thus creates the problems you are seeing. Because the code that automatically turns this off for you no longer works, you are seeing this error.

8

Unfortunately, you still get pressured in issues

Lesson #9: Stand up for yourself

Thanks for reporting the issue!

I think this is a shortcoming of the documentation, but this requires the webpack 5 builder to work. I wrongly assumed that if you were trying to get storybook to work with nextjs, you would stumble upon the [official storybook guide to getting set up with nextjs](#), and see that they specify to use the webpack 5 builder: `npx sb init --builder webpack5`.

If there is enough support, I'd consider making this work with webpack 4, but for now I'd recommend moving to webpack 5 if able since that is what storybook specifies when working with their tool and nextjs.

Before I close this, do you have a specific need to be on webpack 4? Is there anyway I could have made this easier for you except put the webpack 5 requirement in the documentation?

Thanks for replying.

I think putting the webpack 5 requirement and the link [official storybook guide to getting set up with nextjs](#) in the documentation would be enough.

I'm going to close this issue.

Thanks again.

That was an amazing turnaround time, thank you so much. It works like a charm. And also thanks a lot for the addon in the first place!
